January 26, 2010

Dear Nancy Gilbert:

The U.S. Department of Agriculture's Animal and Plant Health Inspection Service (APHIS), in conjunction with Federal, State, and local cooperators, is preparing for possible grasshopper/ Mormon cricket suppression programs on rangeland in eastern Oregon again this year. The Plant Protection Act of 2000 (7 U.S.C. § 7717) directs APHIS to respond to land manager requests for assistance. Endangered Species Act (ESA), Section 7 consultations are proceeding between our agencies at the national level for the entire program area (17 western states). However, these national consultations will not be completed in time for this season. Therefore, this letter is to request an informal exchange of Section 7 consultation information between the FWS and APHIS to ensure that any grasshopper suppression programs conducted by APHIS in Oregon are in full compliance with the ESA.

In consultation with your Agency, APHIS has prepared a 2010 Biological Assessment (BA) which arrives at a determination of no effect or not likely to adversely affect for each listed species and corresponding critical habitat which occur in the proposed suppression (action) area of Oregon. Where it is determined that the action may affect a listed species or its habitat, the BA specifies mitigation measures that are designed to reduce the potential effects to the point where they are not likely to adversely affect the listed species or its habitat. This BA also addresses the chemical diflufenzuron (Dimilin) and the RAATs (Reduced Agent-Area Treatment) strategy as treatment alternatives which were not considered in the last National Programmatic Biological Opinion, October 3, 1995.

The informal local consultation process has been used the past seven years to obtain concurrence from your agency on the effects determinations made by APHIS. For this season there are no changes in the chemicals available or the methods of application. We are proposing the same mitigation measures that were agreed to in the 2009 consultation.

With this letter, APHIS is requesting concurrence with our determination for listed and proposed species, and listed and proposed critical habitat that may occur in Oregon within the area of the proposed 2010 grasshopper suppression program. Please provide

any coordination necessary with the FWS Klamath Falls Office for areas of Klamath and Lake Counties. A written response from FWS is requested indicating whether you concur with the "no effect" and the "not likely to adversely affect" determinations in the Biological Assessment.

Enclosed are program guides and information to assist you in understanding how our treatment programs operate. The 2009 Environmental Monitoring Report should be final soon. I will forward this document as soon as it arrives.

Your cooperation and timely response in assisting APHIS to meet its Endangered Species Act responsibilities are appreciated. If you have any questions regarding these requests, please contact me at (503) 326-2814 x239.

Sincerely,

Gary W. Brown
